

Behigu Gizachew Mesfin

Software Engineer

Addis Ababa, Ethiopia +251 918 216 560 be.gizachew@gmail.com [GitHub](#) [LinkedIn](#) [Portfolio](#) [WhatsApp](#)

Profile

Software engineering leader with 6+ years building healthcare, fintech and data platforms. At ICL/Cerba Lancet Africa I lead a 12-person team and an IT budget of over ETB 20M, and delivered a lab platform that serves 20 branches and 200+ client companies and halved test turnaround time. My background spans full-stack development (Java, Laravel, .NET, TypeScript), cloud and DevOps on Azure and AWS, data engineering at Huawei on telebirr, and machine learning, including LLM and RAG applications.

12

engineers led, with an ETB 20M+ IT budget

50%

faster lab test turnaround

67%

faster deployments via CI/CD

2,000+

lab orders a day, 200+ clients, 20 branches

Skills

Languages	Java, Python, TypeScript, JavaScript, PHP, C#, SQL
Backend & web	Spring Boot, Laravel, .NET, Node.js, React, Next.js, REST APIs, HL7 (TCP/IP)
Cloud & DevOps	Azure, AWS, Azure DevOps CI/CD, Docker & Kubernetes in production, Linux administration, Nginx
Data & BI	PostgreSQL, MySQL, SQL Server, Oracle, MongoDB, Redis, Snowflake, ETL/ELT, dbt, Airflow, Power BI, Tableau, Looker/LookML
AI & ML	OpenAI & Claude APIs, RAG, speech-to-text, NLP, scikit-learn, TensorFlow, PyTorch, MLflow, DVC
Leadership	Team of 12, Agile sprints in Azure DevOps, IT budget & vendor management, code review, requirements gathering
Languages spoken	Amharic (native), English (fluent)

Experience

Software Development Manager · ICL / Cerba Lancet Africa	01/2025 – Present · Addis Ababa
- Lead a 12-person engineering team and manage an IT budget of over ETB 20M, including vendor proposals and procurement. - Led the replacement of a legacy multi-node lab system, where one corrupted node synced bad data to every site and caused constant IT firefighting, with a centralized platform that added online payments. - The platform now serves 20 internal lab branches and 200+ client companies, handling 2,000+ orders a day with their questionnaires, forms and payment data, and cut test turnaround time by 50%. - Built CI/CD pipelines in Azure DevOps that replaced manual releases and cut deployment time by 67%, from 30 to 10 minutes. - Run the team's Agile sprints in Azure DevOps and review code across Java, Python, .NET, Laravel and React projects. - Deploy and operate services on Azure and AWS with Docker and Kubernetes in production, on Linux servers behind Nginx.	
Senior Software Developer · ICL / Cerba Lancet Africa	07/2023 – 01/2025 · Addis Ababa
- Built web applications for lab test requests, results delivery, turnaround tracking and pricing for B2B and B2C clients. - Delivered role-based portals for businesses, consumers, doctors and finance staff, with reporting dashboards for data-driven decisions. - Integrated systems over HL7 (TCP/IP), HTTPS and file-based interfaces, backed by SQL and NoSQL databases. - Led feature design with the development team, gathered requirements from end users, and set coding standards.	

Assistant Engineer, Data Analyst · Huawei (telebirr project)

10/2022 – 07/2023 · Addis Ababa

- Designed and maintained data systems for telebirr, Ethiopia's largest mobile money platform, which reached **34.3M subscribers** and **ETB 679.2B** in transactions in 2022/23.
- Mined and cleaned data from primary and secondary sources into analysis-ready datasets.
- Ran statistical analysis to find trends and patterns for diagnostic and predictive analytics.
- Produced executive reports and dashboards on trends and forecasts, and proposed product features based on usage data.

Software Developer · ICL

11/2021 – 10/2022 · Addis Ababa

- Built REST APIs and role-based web systems with third-party API integrations and CSV import and export.
- Built analytics and data visualizations for internal reporting.

Junior Developer · JakTech

06/2021 – 10/2021 · Addis Ababa

- Wrote software requirement specifications and built API-driven, role-based systems for outsourced client projects.

Junior Software Developer · EMSA

03/2020 – 05/2021 · Bahir Dar

- Built a Laravel web app and Android app that registered users and taught COVID-19 safety through a game, with a real-time dashboard of signups, game results, location and device data.

Selected projects

- **Amharic speech-to-text**: deep learning model in Python that transcribes Amharic speech to text.
- **Sales forecasting**: time series model forecasting sales across multiple stores from historical sales and store attributes.
- **SmartAd A/B testing**: measured which of two ad variants drove a higher click-through rate.
- **Twitter topic modeling**: sentiment and topic analysis of keyword-based tweets.
- **LookML sales analytics**: Looker data model, explores and dashboards for a rental company's sales data.

Education & training

- **BSc Software Engineering**, Bahir Dar University · 2014 – 2019
- **Machine Learning Engineer Training**, 10 Academy · 2021: ML, MLOps (MLflow, DVC), data engineering (dbt, Airflow), AWS and GCP
- **Certificates**: Python for Data Science & Machine Learning A–Z (Udemy), Machine Learning Real World Projects in Python (Udemy), Advanced Python, Relational & Non-Relational Databases, Advanced English (2022 – 2023)
